Campus Development and Maintenance – Makati

PLANNING DEVELOPMENT – NEW BUILD STANDARDS

Our sustainability and environmental management commitments were carried over in designing the new Mapua Makati Campus. It was designed to comply with the requirements of the Philippine and Makati Green Code. The new campus building has the following sustainable and environment-friendly features:

- Energy Efficiency- Installed VRF Systems for the air conditioning system, LED lighting fixtures and occupancy sensor. The windows are double-glazed with low-E system for reduced heat loads and provide sound proofing.

- Water Efficiency- Installed low water consumption flush valves for the toilet fixtures. We have also adopted a technology to be able to re-use water from the STP after using our Sequence Batching Reactor (SBR) technology in water treatment.
