

# Information Campaign on Energy Efficiency and Clean Energy to Local Community Partners

October 14, 2020

To promote awareness on energy conservation and clean energy, a community meeting was held via Zoom meeting to Mapúa's local community partners. The discussion tackled the different ways and techniques on how people in the community can do their simple part in eliminating energy waste. Posters were also distributed to community for information dissemination.

Photos show the screenshots of the community meeting attended by community officials.

Since 2020, posters were continuously distributed to the partner communities as an info campaign to use energy efficiently. It also serves to promote a public pledge toward 100% renewable energy beyond the university.

Use energy-efficient light bulbs and appliances.

Unplug appliances if not in use.

Monitor charging of devices.

Harness daylight from the sun.

Regularly clean light bulbs to obtain their full brightness.

Use renewable energy sources  
– solar and wind power.
